Introducing the Minitor VI Two-Tone Voice Pager: Rugged, Reliable and Built for the Realities of Fire, Rescue Services

The needs and environments of volunteer firefighters are unique and challenging. Budgets are small, distances great, cellular coverage spotty.

Yet the mission remains critical: helping to protect communities and helping to save lives.

Since 1975, generations of volunteer firefighters across North America have relied on the Minitor pager to receive the call for help, wherever they are. Motorola Solutions, Inc. is pleased to introduce the Minitor VI, the latest and most full-featured pager in the Minitor line-up.

Small and light yet incredibly tough, the Minitor VI is built to get the job done right. Its improved receiver is designed for maximum range and intelligibility. The Minitor VI has been designed to survive the challenging conditions that first responders face in the field every day.

KEY FEATURES

The Minitor VI two-tone voice pager records and manages up to 16 minutes of messages, allowing for users to replay, skip, fast forward, rewind, lock, unlock and delete messages for quick review and prioritization of calls. Call alerts, memo announcements and vibrate types can be customized by call address so users know immediately who is paging them.

Available in an Intrinsically Safe model for use around flammable gases, aerosols and particulates, the pager is built to be small and unobtrusive, yet tough enough to withstand searing heat, smoke, grime, water spray and many other challenges in the field.

Every Minitor VI pager is put through a series of tests that simulate seven years of operation in the field. The Minitor VI comes with a charger base and a rechargeable lithium-ion battery, able to last for several days. An alkaline battery tray is also available so users can change to back-up batteries in the field. Voice announcements also indicate battery levels, and an optional desktop charger with built-in audio amplifier ensures that a page can be heard throughout a home or place of business.

MINITOR VI – KEY ADVANTAGES

- Sleek form factor – better ergonomics
- 2 year warranty is standard
- High capacity Lithium-Ion battery
- Battery level voice announcements
- Customizable alerts & vibrate profiles
- Higher water resistance rating – IP56
- Up to 16 minutes of voice recording
- 5 Channel model available
- Intrinsically Safe (IS) model available

Why use an Intrinsically Safe Pager?

Do you know any firefighters that work in grain elevators or feed mills? What about in the oil fields or servicing the oil and gas pipelines? Safety in these workplaces is critically dependant on using electrical equipment that is intrinsically safe.

Intrinsic safety is a concept essential for fire fighting and rescue operations. Wherever there is a risk of igniting flammable or explosive substances in the surrounding air, the use of electrical equipment that is not intrinsically safe creates a risky situation. The risk comes from electrical sparks and abnormally high temperatures within device components that could ignite flammable or explosive substances in the surrounding air.

Common situations where a hazardous atmosphere could be present include; chemical spills, confined spaces, gas leaks, grain elevators and feed mills. When you work in settings like these it is crucial that your pager is certified as Intrinsically Safe. If you work in this type of setting, and use a pager that is not intrinsically safe, then your pager could be the source of ignition in the combustible atmosphere you spend your days in.

The new Minitor VI pager is available in both a Standard and Intrinsically Safe (IS) models. The Standard model is less expensive, but if you work in a combustible atmosphere you cannot afford to compromise your safety and the safety of your co-workers. **Insist on using the Intrinsically Safe Minitor VI pager.**
